

Complex problems need inventive solutions

Project logistics – beyond the box thinking

With global commerce and the need for systems and supply chains to work seamlessly, there is a vast demand for the infrastructure that supports them. Often it requires establishing operations in remote locations and transporting oversized, heavy industrial equipment and components long distances, sometimes across the world. Not everything can fit in a shipping container – but nothing can't be moved.

No two project logistics operations are the same, but they all have some things in common; the need for creative problem solving and meticulous planning.

Why Magellan & Accord?

Accord is a leading provider of globally integrated end-to-end project logistics solutions tailored to industry-specific requirements. Recently merged with Magellan Logistics and part of the UTC Overseas group with over 1000 specialists worldwide, we are available when you need us throughout the delivery of your complex project.

Our highly experienced and hands-on team has an impressive track record of providing forwarding and logistics services to move materials and oversized equipment for various sectors, including oil & gas, minerals, energy and construction and other major infrastructure from inception to completion.

When it just HAS to happen

Our service includes:

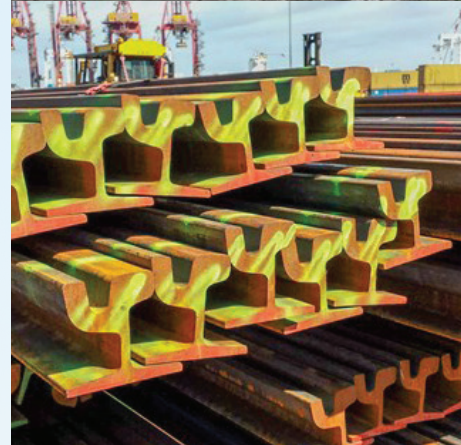

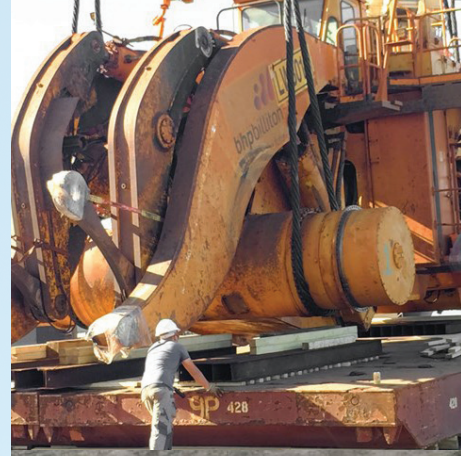

- Pre-contract feasibility research to identify the best mix of transport modes, routes and whether transport infrastructure will need to be created or changed. This may include widening roads, strengthening bridges, or building bypasses
- Coordinating the administration and operational procedures for the project
- Coordinating logistics services and liaising with different service providers
- Documenting processes for loading, transporting and unloading heavy cargoes
- Ensuring compliance with local Governments, Customs, shipping regulations, quality requirements and safety procedures
- Heavy lift transportation door to door via road, rail, sea and air with scheduled and charter carriers including loading and unloading supervision
- Ensuring projects run according to company policies and procedures and meet all contractual needs
- Full loads / individual consignments and cross trades
- Special transports and breakbulk
- Part and full charters for both air and sea
- Dismantling, shipping and transport of mining equipment according to Original Equipment Manufacturer (OEM) requirements
- An Australia-based expert, licensed customs broker, ensures accurate rating of duties and taxes, so you receive the correct concessions and benefits
- Digital track & trace with MagTrack's portal - automated reporting and system integration provides complete visibility and control of all shipping activity
- Our ATT accreditation recognises our secure supply chain and compliant trade practices and gives us and you a range of trade facilitation benefits such as differentiated examinations and speedier processing at the Australian border

Charles Hyson

General Manager – Projects

A project forwarding specialist with over 20 years of experience, Charles has managed hundreds of shipments for energy grids, power stations, solar and wind farms, rail, road, pipeline and mining infrastructure projects on behalf of Governments and enterprises throughout Australia. He is a font of knowledge when it comes to the effective management of project logistics.

We have the experience to handle your project cargo. Whether it's industrial components, heavy machinery or relocating and refitting a factory, get in touch with Charles on + 61 412 631 602 or charles.h@maglog.com.au
